

Octapharma Conservation of pharmaceutical products

Equipment: CX30 & CKC20 range of cellar cooler systems

Distributor Specified: Cest, Portugal

Date Specified: 2004

Through our Portuguese distributor, Cest, we were able to supply our cellar cooling equipment for use in preserving pharmaceutical products and proteins for use in critical care including haematology and immunotherapy.

The unique antimicrobial properties and ability to maintain temperatures down to 4°C make our CX range of cellar coolers ideal for a multitude of applications including the preservation of sensitive equipment. Able to resist the spread of bacteria thanks to embedded additives, the plastic one-piece moulded chassis is ideal for environments where contamination is a risk.
