

Ten Trinity Square Wine storage

Equipment: CO2 Cassettes

Specified to: Green Cooling

Date Specified: May 2017

With environmental impact, efficiency and longevity in mind, Green Cooling approached Marstair in order to select suitable CO2 fan coils for use within the Ten Trinity Square project. The application was to provide wine storage at 12°C from a centralised CO2 refrigeration system.

Selecting from our range of CO2 evaporators we assisted in providing a number of CO2 cassettes to ensure the complete cooling of both the room and its contents. Our CO2 cassettes allowed for discreet operation and were compatible with the CO2 refrigeration system already specified for use within this high profile project.
